

What's new in Vertex Flow 2020

Fin: Mitä uutta Vertex
Flow 2020

Manage project permissions

A project organization with named members is required to complete the projects. Now you can assign roles to projects in Flow and add those roles to the permission tables.

Permission management is now more transparent

Now you can look at the permissions of objects and track the user who has, for example, the right to change or see the object.

Leave all file conversions in the background converter

Now also light models and reference models can be left to Flow's background File Converter

Forget the Java plugin updates

We recommend the latest versions of Chrome and Firefox browsers for Windows.

Firefox

Chrome

An open interface for application developers and integrators

Connect Flow more easily to your other business applications with the Open Open API.

You choose who you work with and what you do yourself.
