Browsers 2020

- We are giving up IE and the Java workstation
    - The workstation's Java applet has been replaced by Flowlet
    - IE "forced" has left
    - Use common browsers with Flowlet
- Flowlet settings and using
- One consequence of abandoning the Java applet
    - Enter the Comp Use code for the parts list by typing

⚠ These reforms are presented in Vertex Flow's main version 20.0.00 (Vertex 2020)

We are giving up IE and the Java workstation

The workstation's Java applet has been replaced by Flowlet

Most browsers no longer support the Java applet on workstations (due to security issues). In Vertex Flow it was used for example.to **Check out** office documents from the server to the client and **Check in** from the client to the Flow server.

The Java applet has been replaced by Vertex Systems Oy's proprietary Flowlet, a standalone application that runs in the background to transfer files from the server to the client and back.

IE "forced" has left

From now on, Flow's functionality no longer requires IE (Microsoft's Internet Explorer browser).

- For a long time, this browser was almost mandatory for Flow because the features were customized for it.
- The browser is no longer actively supported by Vertex Systems Oy, but it is still available.
- IE does not use the Flowlet applet but still uses Java

Use common browsers with Flowlet

You can use common browsers such as:

- Crome
- Mozilla Firefox

Flowlet settings and using

See Installing and using Flowlet: Flowlet

One consequence of abandoning the Java applet

Enter the Comp Use code for the parts list by typing

Type in the **Comp use** field. The menu is no longer available.

Quantity	Consump / Unit	Unit	Comp use	Techn. params	Variant	Condition	
1		kpl					...
1		kpl					
1		kpl					...

In the older version it opened a menu based on old "Java technology":

Structure

Quantity	Consump / Unit	Unit	Comp use	Techn. params	Variant	Condition
1		kpl				
2	368	kpl				
2	184	mm
